SENSE!!

INTRODUCTION

Temperate Grassland is the place you want to be in. It's comfortable and peaceful. It is usually found in the Northern Hemisphere where there is nothing but grass. These grasslands are well preserved where animals are found in their natural habitat. Temperatures can change drastically, one minute it's hot the next freezing cold. But don't let that stop you!

You'll still have the time of your life!

LOCATION

WEATHER

The types of grasslands are prairies, pampas, savana, steppes and veldt.

The prairies are short and tall grass. The temperature are 20°F in January and in July 70°F and the annual rain fall is 10-30 inches.

The savana is a tropical grassland in Africa. This is a cooler dry season that can last up to 8 months there is a little grassland here.

In Argentina there is lots rain so this means that the grass is very tall.

On the other side the steppes have a very dry climate there is little or no rain fall the grass is very short here.

PLANT LIFE

This is Milkweed a popular plant found in the typical grassland.

Two plants that you find more often are Stinging Nettle and Milkweed. They both are very dangerous but very helpful. Stinging Nettle is found in Europe. Milkweed is found in South America, Southern Canada, and Central U.S.

Milkweed is a poisonous and helpful plant. The Omaha Indians used the root as a medicine for wounds. Navaho women used it to make tea to prevent pregnancy. Milkweed is a native plant of the South American grasslands. It's found in South America, Southern Can-
